

A collection of highly efficient gas and electric fires and stoves

Charlton & Jenrick^{LTD}
Best of British fires, fireplaces & stoves

Introducing the Paragon full line collection from Charlton & Jenrick

For over 30 years, Charlton & Jenrick have been at the forefront of improving the technology and efficiency of 'living flame' gas & electric fires.

For homes with or without a chimney, for a traditional or modern feel, Paragon has a range of open-flame and super-efficient glass-fronted fires that will create the perfect centrepiece for your living room.

Tailor your fire to meet your needs

You can tailor your fire to your exact taste and needs, choosing from our extensive range of different frets, trims and fascias, fuel beds, and a choice of control type. Add to that hole-in-the-wall or conventional installation, you will see that with Paragon you're spoilt for choice.

A photograph of two young girls lying on a light-colored, shaggy rug. The girl on the left has long brown hair and is wearing a yellow shirt. The girl on the right has blonde hair and is wearing a white shirt. They are both smiling and looking at a white smartphone held by the girl on the right. The background is a bright, out-of-focus indoor setting.

Introducing

Open-flame for a more welcoming warmth

Nothing is as welcoming as a 'living flame' fire, with superb and realistic fuel beds, designed to give you all the glowing warmth you need.

Hybrid technology for enhanced performance with the look of an open-flame fire.

The new hybrid technology brings high-efficiency performance combined with the appeal of a welcoming open-flame fire.

Glass-fronted for a more efficient heat

Glass window technology gives class-leading thermal efficiency, so important with today's rising gas prices.

Electric fires and stoves.

Our electric fires have been intelligently designed with versatility in mind so they are suitable for any room, whether traditional or contemporary, incorporating realistic flame effects from 3D Ecoflame™ technology which brings a comforting warmth to any home.

Options

All fires **approved to latest efficiency standards** for UK inset gas fires.

Here at Charlton and Jenrick we constantly strive to maintain a high level of efficiency, with our most efficient fires achieving up to 87.5% efficiency.

EXAMPLE USED: P9 BF

*As part of the continual improvement programme at **Charlton & Jenrick** we take pride in innovating & developing our fires, always striving for improvements. Part of this process requires that we test all our gas fires to the current efficiency standards, ensuring our customers always receive up-to-date products.*

*All the open-flue inset fires (both open-front and glass-front) in this brochure have been independently certified to the efficiency requirements of **BS 7977-1:2009+A1 :2013** which came into force in late 2013 and included an amendment that requires all gas fires to be tested without excessive spillage on the efficiency test rig to claim an efficiency. Balanced-flue fires and direct connection open-flue fires are tested to the latest revision of **BSEN613: 2001**.*

The efficiencies quoted in this brochure are the Net efficiencies which are usually advertised in marketing literature. A brief explanation is on the following spread and if you wish to see a copy of the standards we use, further details can be found at www.bsigroup.com.

Standards

SAP Rating

If you are buying a new home the SAP rating will be of importance and the efficiency of the fire can either have a positive or negative effect on the rating. If the efficiency is not certified as precisely the latest standards (detailed left) then it will be included in the calculation at the minimum level for that class of fire not the one claimed by the manufacturer.

Efficiency explained

Net Efficiency v Gross Efficiency

Net efficiency calculations assume that the energy contained in the water vapour which is formed as a product of combustion is recovered in some way, e.g. into the fabric of the building and is not lost from the flue/chimney. Gross combustion efficiency calculations assume that the energy contained in the water vapour is not recovered and is lost to the outside air. Typically the difference between the value of net combustion efficiency and the value of gross combustion efficiency for a natural gas fire is around 5 to 8 percentage points with the net value being higher than the gross value. Most gas fire manufacturers quote their efficiencies based on the net combustion efficiency, although the gross value is often stated in the installation instructions for Building Regulations purposes.

Energy efficiency for SAP ratings in your home

The latest version of The Building Regulations call upon the mentioned standard efficiency tests in relation to calculating the rating of your gas fire for SAP (Standard Assessment Procedure) purposes. If your fire has not been approved to the correct standards then an accurate calculation cannot be made and a nominal low standard figure from the SAP guide will be used instead. For more details please visit www.gov.uk/standard-assessment-procedure

When considering your purchase of a gas fire it is important to ensure you are comparing like for like. If unsure it is always worth confirming with the staff in the showroom you are using, or the manufacturer of the fire, that the appliance has been tested to the very latest version of *BS7977 i.e. including +A1: 2013*.

Tested and approved with guaranteed quality

Every Paragon fire is designed to the highest standards using only the finest materials, as well as being tested and approved to European standards, meaning we can be confident about every fire we make. So confident, in fact, each fire comes with a **5-year parts warranty.***

*Subject to terms and conditions which you will find on our website.

All Paragon gas fires are manufactured under a BS EN ISO 9001 quality system (registration number 5195), which covers all areas of product design, development, manufacture and service.

Specs & Dimensions	66

Fits most chimneys and pre-cast flues

2000 Plus

No more pre-cast flue compromises. The 2000 Plus is our most versatile fire. It is designed specifically for chimneys or pre-cast flues and is suitable for either hearth or wall mounting.

Nothing is as welcoming as a 'living flame' fire and with the 2000 Plus range you can find a model to fit every home, making a comfort statement in any room. The superb, realistic coal and pebble fire effects produce up to 4.0kW heat output at a 56.6% efficiency, giving you all the glowing warmth you need.

Spoilt for choice

But the 2000 Plus range isn't just about practical efficiency; it's also about style and design. You can choose from a large range of trim and fascia options, with five fret designs in up to four finishes and all are available with a choice of beige ribbed, plain or brick firebacks. So you can make a real style statement with a contemporary look, or go for a more traditional design.

No hearth

The 2000 Plus can be installed on either a mini hearth or with a 4-sided trim if the fire is a minimum of 105mm (4¼") off the floor.

The 2000 Plus range also has the option of a retro-fitted canopy; this not only looks good but it is also designed for certain older pre-cast flues, where air flow is restricted through poor flue design, to improve the performance of the flue.

Brass trim and brass Wellington fret shown with coal fuel bed and optional canopy.

Firebed

2000 Extra

A highly efficient 'living flame' gas fire with all the glowing warmth you need

An efficient open-flame gas fire suitable for hearth or wall mounting.

The 2000 Extra gives practical efficiency, coupled with design and style. Choose from a wide range of fascia and trim options to make a real style statement, either contemporary or traditional.

Designed to be super efficient, the 2000 Extra is specifically made for chimneys or pre-cast flues.

- Choice of manual, slide or battery-operated remote control complete the package
- Realistic coal fuel bed
- Includes a 5-year parts warranty, subject to terms and conditions
- Heat output of up to 4.0kW
- 63% efficiency

Choose the style and design to suit your home

A complete range of trim and fret options is shown on page 60-63.

Coal fuel bed.

2000 Extra with chrome Cast Arch fascia and coal fuel bed.

Flue and hearth: The Paragon 2000 Extra range is designed to operate on pre-cast flues with a 75mm (3") rebated surround, or class I or II flues. The min. diameter of a circular flue is 125mm (5").

Ventilation: The Paragon 2000 Extra range does not normally require any purpose-built ventilation. Please note that within the island of Ireland, permanent ventilation must comply with the regulations currently in force.

Fire spacers: Two types of spacers are available to facilitate fitting the fire in the shallower flue openings: 20mm and 43mm.

Power flue – Not for Chimneys

2000 Turbo

The no chimney, no flue solution.

With a power flue, everyone can enjoy an open, living flame fire.

How a power flue works

If you do not have a chimney or flue but have a suitable outside wall, then a power flue fire can remove the fumes horizontally through the wall with the aid of a fan. This gives you the beauty of a living flame fire without glass panels.

Being at the forefront of gas fire technology has enabled Paragon to produce a world-beating range of 'Turbo' fires and with safety in mind, there's an electronic air-flow management system to ensure correct air flow is maintained.

The power flue can be specified with a choice of trims

Like all the 2000 Plus range, you can choose from a wide range of frets, trims, fire backs and fuel beds to tailor the fire to your personal taste.

The standard fan cover.

FIRE IN CAVITY WALL.
INSET FAN UNIT.

MANUAL INSET FAN.

FIRE IN CAVITY WALL.
FAN UNIT SURFACE MOUNTED.

MANUAL OUTSET FAN.

If the appliance is set back into the cavity, the space behind, to the sides and above must be insulated i.e. Rockwool. Minimum dimension will depend upon wall thickness.

Flue and hearth: A non-combustible hearth must extend a minimum 300mm (12") in front of the fire and 150mm (6") either side with a non-combustible depth of 50mm (2"), or a mini hearth at minimum 105mm (4 1/4") off the floor with depth of 100mm (4") and width of 505mm (20"). The fan unit protrudes outside the wall of your house. If this airspace is not your own, we recommend that you obtain the owner's written permission before proceeding. Standard flue length 435mm, optional flue length 1000mm.

Ventilation: The Paragon 2000 Plus Turbo does not normally require any purpose-built ventilation. Please note that within the island of Ireland, permanent ventilation must comply with the regulations currently in force. There are special rules for timber-framed houses.

Fits most chimneys and pre-cast flues

2000 Low Lintel

All the features and benefits of the Paragon 2000 Plus with a reduced-height fire box to fit into 20" openings.

Like the 2000 Plus, the 2000 low lintel is designed to fit most chimneys or pre-cast flues and has the added benefit of fitting under lintels that are 20 inches off the hearth.

- 3.6kW output Natural Gas fire
- 57% efficiency
- Realistic coal fuel bed
- Available in slide control
- Choice of brass or stainless steel trims
- 5-year parts guarantee, subject to terms and conditions

Fits most chimneys and pre-cast flues

Slimline 3

Slim, elegant and the perfect fire for virtually any chimney or flue.

With its remarkably slim profile, the Slimline 3 is especially designed for pre-cast flues but will fit almost any flue, from conventional chimneys to pre-fabricated flues.

- An advanced burner provides what is probably the most realistic flame effect and fuel bed with high-efficiency heat output
- Choice of trims and frets in four different finishes and four contemporary fascias; see pages 54 to 57 for full range
- Choice of coal or pebble fuel beds
- Choice of manual or slide controls
- A unique front of fire bed glow adds to the welcoming realism of this exquisite model
- A low lintel version is available for 20" high openings
- Fits majority of pre-cast flues on a 1" rebate
- Heat output 4.1kW
- 64.9% efficiency
- 5-year parts guarantee, subject to terms and conditions

Flue and hearth: The Slimline 3 range is designed to operate on pre-cast, class I and class II flues. The minimum diameter of a circular flue is 125mm (5") with minimum effective height of 3 metres. Pre-cast flues must be constructed correctly and the appliance must pass a spillage test upon installation. A non-combustible hearth extending a minimum of 300mm (12") in front of the fire and 150mm (6") either side, with a non-combustible depth of 50mm (2") is required. All chimneys and flues should be regularly checked for debris and efficiency and be swept where appropriate.

Ventilation: The Slimline 3 range does not normally require any purpose-built ventilation. Please note that within the island of Ireland, permanent ventilation must comply with the regulations currently in force.

Low lintel model: For fireplaces with a lower than standard fire opening, a reduced-height model (20") is available to special order.

Fire spacer: spacers are available for fitting fires into shallower flue openings.

Fits most chimneys

Paragon One

An open-flame fire designed to fit most chimneys and class II flues

The Paragon One has been designed to give you the big picture. A huge, realistic fuel bed available with either coal or pebbles. In common with all Paragon products, a wide choice of trims and frets are available to enable you to create your perfect fire. The Paragon One is even suitable for hole-in-the-wall installation.

The Paragon One with a black Cast Arch fascia and coal fuel bed. Shown in the Beckford, Portuguese limestone fireplace from Fireline.

Traditional or hole-in-the-wall installation

Introducing the Paragon One, a class-leading fire for installation into chimneys & class II flues.

- Extra wide and deep fuel bed to give probably the most realistic flame effect in its class
- Heat outputs of up to 3.5kW due to its high-efficiency burner system
- 2 ultra-realistic fuel beds – choose from coal or pebble
- No canopy to mar the clean lines of this classically styled fire
- Choose a control system to suit you: manual, slide or even full sequential remote control
- Can be wall mounted without a hearth using a four-sided trim or three-sided trim on a mini hearth
- 55.5% efficiency
- 5-year parts guarantee, subject to terms and conditions

Also available
as a hole-in-the-wall fire

Fits most chimneys

Convector P1

High-Efficiency Fire

The warmth and comfort of an open-flame gas fire at an affordable price.

The new Convector P1 from Paragon maintains the desirable extra-wide, deep fuel bed of its predecessor, the Paragon One, and benefits from a new firebox body. As well as the convective heat that you would expect, the fire also gives a fantastic radiant warmth. This all combined helps to give the Convector P1 a substantial output of 4.44kW and a very impressive net efficiency of 70.4%.

This practical efficiency, coupled with a realistic fuel bed and a whole range of trim and fret options to stylise the fire, make the new Convector P1 an ideal choice to compliment any room.

One of the most efficient open-flame gas fires on the market.

- Extra wide and deep fuel bed to give probably the most realistic flame effect in its class
- Heat outputs of up to 4.4kW at 70.4% efficiency due to its high-efficiency firebox body
- Ultra-realistic coal fuel bed
- Choice of a manual, slide or remote control
- Choice of fascia and trim options
- 5-year parts guarantee, subject to terms and conditions
- Radiant heat gives an impressive and realistic glow to the fuel bed
- Will operate in most flues including pre-cast subject to an appropriate fireplace. For more details please refer to the installation manual.

P3 Hybrid Series

A new way of thinking

The Paragon P3 Hybrid Series is a natural gas, manual control, convector gas fire combining the performance of a highly-efficient glass-fronted fire with the charm of an open-flame gas fire.

Fitted as a conventional fire

- NEW Hybrid technology gives the fire enhanced performance whilst keeping a lot of the open fire aesthetics
- 4.91kW output from 7.0kW input
- Matt black firebox liners
- Realistic coal flame effect
- 70.8% nett efficiency to current standard BS 7977-1:2009+A1 :2013 Independently tested and verified by Kiwa Gastec
- Choice of trims and frets
- Available in manual and slide control

The latest collection of **glass-fronted** gas fires from **Paragon**

Designed for today's homes with or without a chimney.

Choose the style to suit your home, whether traditional or contemporary, or even a hole-in-the-wall installation – all offering superb high-efficiency, class-leading performance.

Spoilt for choice

With Paragon's range of glass-fronted fires you are spoilt for choice, with options ranging from contemporary hole-in-the-wall fascias, traditional cast-iron fascias and a choice of various styles and designs featuring different finishes. Fires can be installed with or without a hearth and even in homes without a chimney.

More efficient than conventional products

Fires working in a chimney draw warm air from the room into the chimney and it is then replaced by cold air from the outside. This air then has to be heated by the fire, reducing efficiency and increasing costs.

The Paragon Focus range has been scientifically designed to reduce this airflow to a minimum, changing the room air just once per hour against a typical open-fronted gas fire that will change room air up to 12 times per hour.

Minimum room air changes combined with superior thermal efficiency

achieved by ceramic glass-front technology give this range a new level of efficiency and performance.

The Focus range of fires is now available for homes with or without a chimney and the fires are amongst the most efficient designs available.

Typical open-fronted gas fire changes room air up to 12 times per hour.

Paragon Focus HE changes room air just once per hour.

Paragon's Focus RS range does not produce any air changes per hour, as it is room sealed.

Fits most chimneys and pre-cast flues

Focus HE Slimline

*Now you can have a real fire
even where space is limited*

This attractive Focus Slimline fire is designed to give high efficiency in pre-cast flues and it fits easily into a 1" rebate fireplace.

- 3.0kW output
- 77% efficient ceramic glass technology
- Wide choice of trims and frets available
- Realistic coal or pebble fuel bed
- Suitable for pre-cast flues
- Slide control option to eliminate the need to bend down to light the fire*
- Excellent radiant heat output

*Slide control is not available on hole-in-the-wall installations.

Fits most chimneys

Focus HE

Highly-efficient glass-fronted gas fires

Contemporary designs offering efficient heating for homes with a chimney, to fit either hole-in-the-wall or mantel fireplaces.

Heat and efficiency

The new full-length glass window gives class-leading thermal efficiency.

- 4.4kW output
- 82% efficiency
- Ceramic glass technology

Comfort and control

- Manual control concealed behind 'ashpan' cover
- New, easy-to-operate slide lever control available to end the need to bend down to light the fire
- The ultimate luxury – full sequential remote control, the last word in ease of operation – it even lights the pilot each time to save gas

Looks

This fire can take on many different styles:

- Two fuel beds – coal or pebble
- 5 trim styles in up to 8 finishes
- 5 contemporary hearth and hole-in-the-wall fascias
- Pixelated edge glass for clean, neat styling

Flexible design

- Only requires a 4" minimum hearth depth from wall when floor mounted
- Can be mounted without a hearth with a 4-sided fascia
- Suitable for both Class I and 5" flue
- Natural gas or LPG

Fits most chimneys

Focus HE 18"

An extra-wide inset fire giving an exceptional fuel bed and flame

Now you can make the most of your fireplace with these stunning 18" wide traditional inset fires from Paragon.

18 inch wide fires had become a thing of the past due to the large gas input needed to get a decent flame, which also meant you needed additional ventilation in your room. The Focus HE gets around these problems with a fire that is designed to give a superb realistic flame picture from a modest 5.7kW input, meaning there is no need for additional ventilation.

- 5.7kW input, no need for added ventilation
- 4.2kW output
- 82% efficiency
- Extra-wide fuel bed and flame
- Suitable for both Class I and Class II flues
- Full sequence infra-red remote control that lights the pilot light as well as the fire, saving energy and carbon emissions
- Manual control also available
- Traditional or hole-in-the-wall installation
- For a complete range of trim and fret options please see pages 60-63
- Two fuel beds – coal or pebble

Balanced flue – not for chimneys

Focus RS Plus

*One of the most efficient
balanced-flue fires on the market*

The award-winning Paragon RS was a trail blazer in putting the fire back into the fireplace rather than in front of it. The next-generation Focus RS Plus has been designed to build on this excellent foundation.

Heat and efficiency

- 4.3kW output
- 85% efficiency
- Meets the European Class One energy efficiency standard

Comfort and control

This fire may be specified with either:

- Manual control concealed behind 'ashpan' cover
- Slide control also available (on natural gas models only)
- The ultimate luxury – full sequential remote control, the last word in ease of operation – it even lights the pilot each time to save gas

Looks

The Focus RS Plus can take on many different styles:

- 2 fuel beds: coal and pebble
- Contemporary hole-in-the-wall and hearth-mounted fascias
- Pixilated edge glass for clean, neat styling

Flexible design

- Only requires a minimum of 4" hearth depth from the wall if floor mounted
- Can be mounted without a hearth using a 4-sided fascia
- Can be mounted in up to 1.18 metre thick wall. This makes it the fire of choice for houses where the chimney has either failed or been removed at roof level.

For the complete range of trim and fret options available, see pages 60-63.

Balanced flue – not for chimneys

Focus RS Plus 18"

An extra-wide balanced-flue inset fire

Combining one of our most efficient balanced-flue fires with an extra-wide inset to create the Focus RS Plus 18"

Forget preconceptions of past 18" fires, which required a large gas input, our award-winning Paragon Focus RS has an extra-wide firebox, giving an exceptional fuel bed and flame without the need for additional ventilation.

Heat and efficiency

- 5.2kW input
- 3.9kW output
- 85% efficiency

Looks

The Focus RS Plus 18" can take on many different styles:

- Extra-wide fuel bed and flame
- 2 fuel beds – coal or pebble
- See pages 60-63 for a choice of trim and fascia options
- A number of fret options are available, please see page 60 for details
- Manual control

*For the complete range of trim
and fret options see pages 60-63.*

P4 Series

The versatile P series gas fires

The Paragon P4 series is a modern 500mm wide gas fire that can be installed in your home in three different ways, offering the maximum versatility and a look to suit all.

P4 shown as a hole-in-the-wall fitting.

Fits easily as a complete suite or hole-in-the-wall fire

The large 20" glass-fronted P4 fits most back panels and surrounds, making it an ideal fire for fireplace suite packages, and offers a substantial upgrade from a standard 16"/18" glass-fronted fire for very little cost difference.

The P4 when used in a suite with most 3" rebated surrounds is free of an external trim frame and as a result can enhance and complement a multitude of traditional or modern fireplace designs. Sized to fit fireplace openings of a minimum 500mm wide and 555mm high, the P4 is a good size for smaller chimney breasts or moderately sized fireplace suites.

The fire can also be fitted "frameless" into a wall for the modern, minimalistic look. There is also an optional slip kit available should you wish to fit in the wall and finish the edge with marble or stone slips.

- 4.05kW output from modest 5.5kW input
- Matt black or beige firebox liners
- Realistic log flame effect
- 82% efficient to BS7977-1: 2009 + A1: 2013 (as amended)
- Simple slip kit available
- Choice of Graphite or Brushed Stainless Steel trim

Choice of two trims

Brushed steel trim.

Graphite trim.

The third way the fire can be installed is again in the wall but with a trim around the fire to give a traditional hole-in-the-wall look. The fire is launched with a choice of either brushed stainless steel or graphite trims.

P8 Series

A big, 31" super-efficient panoramic gas fire

Like the P4, the P8 is a truly versatile fire that can be fitted in a variety of ways in either modern or traditional settings depending on preference.

A flexible design that can fit flush to the wall or into its own trim or suite – the choice is yours

Like all P series, the P8 offers the ultimate in cost-effective efficiency

- Realistic flame effect from efficient 6.6kW input
- 81% net efficiency approved to the latest amended British Standard BS7977-1: 2009 + A1: 2013 (as amended)
- Output 4.8kW
- Battery remote control
- Choice of metal trims, graphite or stainless steel
- Choice of glass trims, black, white or red glass

P9 Series

A full large fire that fits perfectly in a fireplace

The P9 is the largest of the P Series fires and is designed to fill in between the legs of a fireplace to create an impressive suite. The P9 is available in a wide range of different fireplaces and due to the dimensions will fit into most fireplaces available for sale.

- Realistic flame effect from efficient 7.6kW input
- No need for any additional ventilation in the room
- Output 5.6kW
- 81.3% net efficiency approved to the latest amended British Standard BS7977-1: 2009 + A1: 2013 (as amended)
- Realistic log fuel bed
- Battery remote control

Balanced Flue – Not for Chimneys

P9 BF Series

A large balanced flue gas fire, perfectly for creating a suite

Like the conventional flue version the P9 BF is available in a wide range of different fireplaces and due to the dimensions will fit into most fireplaces available for sale. Being balanced flue means you are not limited to needing a chimney breast and will fit on most outside walls (subject to survey).

- Realistic flame effect from efficient 4kW input
- No need for any additional ventilation in the room
- Output 3.6kW
- Realistic log fuel bed
- 87.5% net efficiency approved to the latest British Standard BS7977-1: 2009 + A1: 2013 (as amended)
- Battery remote control

All P9 BF fires come with a choice of firebox liner

Paragon CF Gas Stove

The efficient, realistic high quality gas flames from Paragon are now available in a stove design.

The Paragon gas stove model is manufactured with heavy-duty, seam-welded steel bodies and doors. The stoves can be fitted in Class 1, Class 2 and pre-cast flues.

- Highly realistic log fuel bed
- Adjustable feet
- Large panoramic window
- Net thermal efficiency of up to 78%
- Operation of the stove is controlled by a single knob for ease of use
- Manual control

Balanced Flue – not for chimneys

Paragon BF Gas Stove

No chimney, no problem with the new Paragon balanced flue gas stove

Like the conventional Paragon gas stove this stove is manufactured with heavy-duty, seam welded steel bodies and door. These stoves will fit onto an outside wall.

- Highly realistic log fuel bed
- Large panoramic viewing window
- Adjustable feet for siting the stove
- Infra-red remote controlled
- Impressive thermal net efficiency of up to 88%

Introducing the new range of **electric** fires and stoves

A popular choice for people who prefer electric to gas or wood burning. Our 3D Ecoflame™ electric appliances are versatile, low wattage and can be fitted virtually anywhere.

Our electric appliances have been intelligently designed with versatility in mind so they are suitable for any room, whether traditional or contemporary offering a comforting warmth to any home.

The appliance uses low energy, high tech LED lights throughout which gives a maintenance free eco-friendly light source.

Unique C&J 3D Ecoflame™ technology produces extra realism and depth illusions to the flame effect without compromise to practicality and energy economy.

Selected artist painted log shapes along with a fuel bed media kit allows you to create your own realistic look.

Can go on most flat cavity walls

P4 Electric Fire

With today's highly efficient homes it is not always needed to have a gas or wood burning fire in your room or fitting such an appliance may not be possible. If however you want the warmth from the look and feel of such fireplaces but without the need for such high heat outputs then an electric suite is ideal.

Product Highlights

- Loose realistic log or coal fuel Bed
- Exciting realistic flame effect with 4 mood settings
- Remote control with timer and thermostat built in
- High level buttons for easy access
- 2 generous heat settings Low 1kW and High 2kW
- Designed to be built into chimney breast or suitable suite
- Can be fully serviced and maintained from the front, with no requirement to remove from the wall
- The appliance uses low energy, high tech LED lights throughout which gives a maintenance free eco-friendly light source
- Unique C&J 3D Ecoflame™ technology produces extra realism and depth illusions to the flame effect without compromise to practicality and energy economy
- Selected artist painted log shapes along with a fuel bed media kit allows you to create your own realistic look

Can be fitted on any flat floor

Paragon Electric Stove

Over the last five or so years the fashion for wood burning stoves has grown. However in many situations fitting a wood stove is either not practical or cost effective. The Paragon Electric Stove is the ideal solution and all it needs to work is a power supply and a flat surface!!

Product highlights

- Loose realistic log or coal fuel bed
- Exciting realistic flame effect with 4 mood settings
- Remote control with timer and thermostat built in
- 2 generous heat settings Low 1kW and High 2kW
- Heavy duty seam welded steel construction for both body and door
- Levelling screws in the feet of the legs for rustic stone hearths
- Replica flue pipe available as an option for that realistic look
- The appliance uses low energy, high tech LED lights throughout which gives a maintenance free eco-friendly light source
- Unique C&J 3D Ecoflame™ technology produces extra realism and depth illusions to the flame effect without compromise to practicality and energy economy
- Selected artist painted log shapes along with a fuel bed media kit allows you to create your own realistic look

Features:

Chirbury Cast

Chirbury Performance Combo Cast

The Performance Combo provides the traditional Victorian cast fireplace appearance with the advantage of a gas fire of a higher performance and efficiency, which would not normally be available with a traditional cast.

This patented system is designed to work with a range of gas fires from Charlton & Jenrick including the Paragon One, Paragon 2000 Plus & Slimline 3 fires in this brochure. (Manual and remote versions only.)

This cast is also designed for use with our glass-fronted gas fires. The cast allows for easy removal of the fire for its annual servicing, something that many casts can't facilitate.

*A large selection of casts are available.
Please contact us for more details.*

Choosing the right fire for your lifestyle

Current gas safety regulations stipulate that any gas installation must be carried out by a Registered Gas Safe engineer. Your Paragon authorised dealer will be able to advise you on which model will best suit your home, what options are available and how to choose your Gas Safe registered fitter.

Our network of nationwide dealers is here to help you to enjoy the experience of owning a living flame gas fire.

Due to the vast number of varying flue types, your existing fire may need to be removed to confirm your flue and product suitability.

Typical flue types

Chimney

A **brick chimney (Class I)** is recognised by a chimney stack with accompanying terracotta pot or gas terminal. Internal dimensions are usually either 9"x 9" (229 x 229mm) square or 8" – 9" (229 – 254mm) round cross-section.

Pre-fabricated flue

A **pre-fabricated flue (Class II)** has a metal flue and terminal. The internal dimensions are usually 5" (125mm) or greater round cross-section.

Pre-cast flue

A **pre-cast flue** can be identified by a ridge vent or metal flue tube and terminal. The internal dimensions vary but most Paragon fires will operate on 13500mm² or greater cross-section pre-cast flues in good working order.

No chimney or flue

No chimney or flue – if you have nothing on your roof, you probably have no chimney or flue. In this case, a **balanced flue** will usually suit this situation when positioned on a suitable outside wall.

Standard fan cover

Standard fan cover – Power flue fires have a flue pipe coming out of the outside wall and the fan cover is used to make this safe.

Note: All chimneys and flues should be regularly checked for debris and efficiency and swept where appropriate. Chimneys and flues, even if properly constructed, can suffer from unexpected problems that cannot always be detected prior to installation. For this reason, the smoke test outlined in the fitting instructions must always be completed prior to and after installation of any gas fire.
